50-inch diagonal High Definition Plasma Display

Superior Picture Quality, Usability, Expandability — The Performance You Need in Professional Applications Superior Picture Quality, Usability, Expandability — The Performance You Need in Professional Applications.

Real MACH System: The Industry's Best Overall Picture Quality

Panasonic developed two new advanced components and integrated them in a synergetic way to form what we call the Real MACH system. The MACH Crystallizer provides the best driving characteristics for the display device. The MACH (Multi-facet Asymmetrical Configuration Hyper-pixel) Panel then delivers the image's full quality potential. Together, these Panasonic plasma display technologies reproduce images with the gradation and sharpness levels that are best suited to the way the human eye perceives objects. The result is picture quality and image depth that make for a high-impact viewing experience.

Functions that Improve Usability

Panasonic plasma displays offer a host of versatile functions that maximize display performance. For example, with Dual Picture mode you can simultaneously display signals from any two connected AV sources onto a single screen. Or with Digital Zoom, you can enlarge a portion of an image by up to three times normal size for added impact. These and other functions make Panasonic plasma display panels an excellent choice for professional applications.
